

# ProminENT

ENT treatment unit

Ergonomic, innovative and modular design with  
extremely high working comfort

# MediTop | ProminENT

The ProminENT distinguishes itself through the combination of a hygienic and modular design and high working comfort. The ProminENT is designed in such a way that all the equipment is within reach. This makes the ProminENT the ultimate ENT treatment unit for every ENT doctor.

The ProminENT can be equipped with a wide range of integrated functions.

## Accessible

The flat surface of the ENT treatment unit offers a lot of work space and provides the unit with a clinical look.

## Instrument drawers within reach

The seamless surface is easy to clean and is durable. The instrument drawers are easily accessible during a examination.

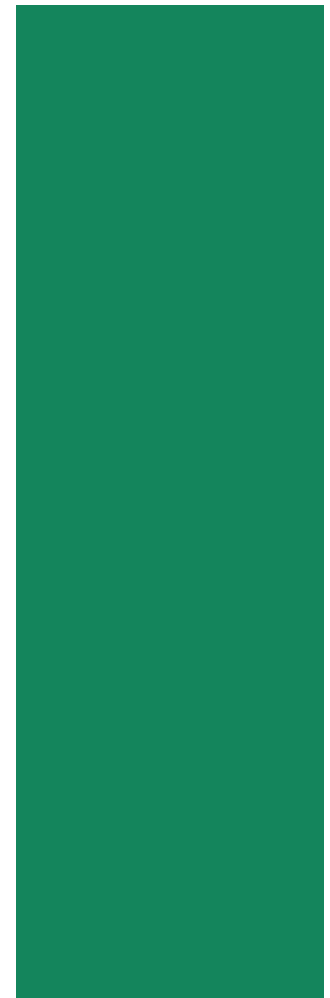

## Innovative

We have further developed the user interface of the ENT treatment unit to become intuitive and automate actions.

The user interface promotes simplicity by having a minimalistic design and only displaying information that is directly required.

Many functions such as the suction system and microscope are automatically activated when required for the examination or treatment. Functions can also be activated using foot control to allow the user to keep their hands.

## Modern Design

For the ProminENT we used a minimalistic approach with high-quality materials, giving the unit a contemporary and sustainable appearance.

## A solution for every room

Because the unit is developed and produced in-house MediTop can guarantee its future sustainability providing upgrades and maintenance over time.

## Customization

MediTop provides customization as a rule. This allows us to create a solution that will fit every room. With our skilled team of designers and craftsmen we provide a very high level of flexibility and are able to design and build a unit that will fit your needs.

## ProminENT Microscopy

The ProminENT Microscopy units are specially designed for treatments in mainly otologic settings, where patients are examined while lying down.

To facilitate the examinations, the microscopy units are equipped with 2 instrument parts; 1 on each side of the extended therapy section. These units can be equipped with many more options, which makes working with these units even more pleasant.
